Låda Booth - phone booth offers privacy to make phone calls free of interruptions in an open plan or activity based office environment. With Låda Booth you can design your office in a totally new way. Placing the booths in the middle of the office staff allows you to realize open plan office without the common noise problems.

The materials and design of the phone booth provide a very effective sound environment excellent for productivity. Due to great sound insulation, your booth can be placed right next to any work station. The interior acoustic felt and the acoustic full and bi-fold door options absorb sound, making the space also echo free and comfortable.

The Låda Booth interiors are designed so that the user is always facing the acoustic accent paneling. Thanks to the electric socket, video and web conferences can also be carried out using a laptop. The booth also has a fan and dimmable LED lighting for added comfort.

Låda Booth phone booths have a fresh modern design. The booth can easily be personalized to match the surrounding space by changing the color of the outside walls and the interior walls. Our booth interior can be configured for free standing work or with fixed classic seating or adjustable seating options.
